

Welcome to the AP Environmental Science Workshop at Woodward Academy. We will address a variety of topics – curriculum, setting up the course, selections of students, field trips etc. We are also going to do a number of labs throughout the week so that you can get an idea about the diversity of labs that are associated with this course.

Please come prepared to do a number of labs outside, so jeans and T-shirts maybe the order of the day.

Also, if you are already teaching the course please bring your textbook. Please also bring an activity that you would like to share with the group – we will have them copied for everyone.

Lastly, bring two burning questions that you would like answered and we will try to work through them together.

Looking forward to seeing you.
